

TS3USB221A-Q1 ESD Protected, High-Speed USB 2.0 (480 Mbps) 1:2 Multiplexer/Demultiplexer Switch With Single Enable

1 Features

- Qualified for Automotive Applications
- AEC-Q100 Qualified With the Following Results:
 - Device Temperature Grade 1: –40°C to 125°C Ambient Operating Temperature Range
 - Device HBM ESD Classification Level H2
 - Device CDM ESD Classification Level C5
- V_{CC} Operation at 2.5 V to 3.3 V
- $V_{I/O}$ Accepts Signals Up to 5.5 V
- 1.8-V Compatible Control-Pin Inputs
- Low-Power Mode When $\overline{OE}$ Is Disabled (1 μ A)
- $r_{ON} = 16\ \Omega$ Maximum
- $\Delta r_{ON} = 0.2\ \Omega$ Typical
- $C_{io(on)} = 6\ \text{pF}$ Typical
- Low Power Consumption (30 μ A Maximum)
- High Bandwidth (900 MHz Typical)
- ESD Performance Tested Per JESD 22
 - 7000-V Human-Body Model (A114-B, Class II)
 - 1000-V Charged-Device Model (C101)
- ESD Performance I/O to GND Per JESD 22
 - 12-kV Human-Body Model

2 Applications

- Routing High Speed USB Signals
- Automotive USB Hubs
- Phone-Controlled Automotive Infotainment

3 Description

The TS3USB221A-Q1 is a high-bandwidth switch specially designed for the switching of high-speed USB 2.0 signals in automotive USB hubs or controllers with limited USB I/Os. The wide bandwidth (900 MHz) of this switch allows signals to pass with minimum edge and phase distortion. The device multiplexes differential outputs from a USB host device to one of two corresponding outputs. The switch is bidirectional and offers little or no attenuation of the high-speed signals at the outputs. It is designed for low bit-to-bit skew and high channel-to-channel noise isolation, and is compatible with various standards, such as high-speed USB 2.0 (480 Mbps).

The TS3USB221A-Q1 integrates ESD protection cells on all pins, is available in a tiny UQFN package (2 mm $\times$ 1.5 mm) and is characterized over the free air temperature range from –40°C to 125°C.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TS3USB221A-Q1	UQFN (10)	1.50 mm $\times$ 2.00 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision C (October 2012) to Revision D	Page
• Added ESD Ratings table, Feature Description section, Device Functional Modes, Application and Implementation section, Power Supply Recommendations section, Layout section, Device and Documentation Support section, and Mechanical, Packaging, and Orderable Information section	1
• Deleted the Ordering Information table; see the POA at the end of the data sheet	1
• Updated Applications section	1
• Changed "in handset and consumer applications, such as cell phones, digital cameras, and notebooks with hubs or controllers with limited USB I/Os" to "in automotive USB hubs or controllers with limited USB I/Os" in Description section	1
• Changed the $R_{\theta JA}$ and $R_{\theta JC(top)}$ values in the Thermal Information table, and added more thermal values	4

Changes from Revision B (July 2011) to Revision C	Page
• Added AEC-Q100 info to Features	1
• Added "Per JESD 22" to ESD Performance I/O to GND in Features.	1
• Added ESD ratings to Abs Max table	4

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

			MIN	MAX	UNIT
V _{CC}	Supply voltage		−0.5	4.6	V
V _{IN}	Control input voltage ⁽²⁾ ⁽³⁾		−0.5	7	V
V _{I/O}	Switch I/O voltage ⁽²⁾ ⁽³⁾ ⁽⁴⁾		−0.5	7	V
I _{IK}	Control input clamp current	V _{IN} < 0		−50	mA
I _{I/OK}	I/O port clamp current	V _{I/O} < 0		−50	mA
I _{I/O}	ON-state switch current ⁽⁵⁾			±120	mA
	Continuous current through V _{CC} or GND			±100	mA
T _{std}	Storage temperature		−65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages are with respect to ground, unless otherwise specified.
- (3) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
- (4) V_I and V_O are used to denote specific conditions for $V_{I/O}$.
- (5) I_I and I_O are used to denote specific conditions for $I_{I/O}$.

6.5 Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

PARAMETER		TEST CONDITIONS		MIN	TYP ⁽²⁾	MAX	UNIT	
V _{IK}	Input-source clamp voltage	V _{CC} = 3.6 V, 2.7 V, I _I = −18 mA				−1.8	V	
I _{IN}	Input leakage current, control inputs	V _{CC} = 3.6 V, 2.7 V, 0 V, V _{IN} = 0 V to 3.6 V				±1	μA	
I _{OZ} ⁽³⁾	Off-state leakage current	V _{CC} = 3.6 V, 2.7 V, V _O = 0 V to 5.25 V, V _I = 0 V, V _{IN} = V _{CC} or GND, Switch OFF				±1	μA	
I _(OFF)	Power-off leakage current	V _{CC} = 0 V	V _{I/O} = 0 V to 5.25 V			±2	μA	
			V _{I/O} = 0 V to 3.6 V			±2		
			V _{I/O} = 0 V to 2.7 V			±1		
I _{CC}	Supply current	V _{CC} = 3.6 V, 2.7 V, V _{IN} = V _{CC} or GND, I _{I/O} = 0 V, Switch ON or OFF				30	μA	
I _{CC}	Supply current (low power mode)	V _{CC} = 3.6 V, 2.7 V, V _{IN} = V _{CC} or GND, Switch disabled, $\overline{OE}$ in high state				1	μA	
ΔI _{CC} ⁽⁴⁾	Supply-current change, control inputs	One input at 1.8 V, Other inputs at V _{CC} or GND	V _{CC} = 3.6 V			20	μA	
			V _{CC} = 2.7 V			0.5		
C _{in}	Input capacitance, control inputs	V _{CC} = 3.3 V, 2.5 V, V _{IN} = V _{CC} or 0 V			1.5	2.5	pF	
C _{io(OFF)}	OFF capacitance	V _{CC} = 3.3 V, 2.5 V, V _{I/O} = V _{CC} or 0 V, Switch OFF			3.5	5	pF	
C _{io(ON)}	ON capacitance	V _{CC} = 3.3 V, 2.5 V, V _{I/O} = V _{CC} or 0 V, Switch ON			6	7.5	pF	
R _{ON} ⁽⁵⁾	ON-state resistance	V _{CC} = 3 V, 2.3 V	V _I = 0 V, I _O = 30 mA	T _A = 25°C		3	6	Ω
			V _I = 2.4 V, I _O = −15 mA			3.4	6	
			V _I = 0 V, I _O = 30 mA	T _A = 125°C		6	10	
			V _I = 2.4 V, I _O = −15 mA			10	16	
ΔR _{ON}	ON-state resistance match between channels	V _{CC} = 3 V, 2.3 V	V _I = 0 V, I _O = 30 mA			0.2	Ω	
			V _I = 1.7, I _O = −15 mA			0.2		
r _{ON(flat)}	ON-state resistance flatness	V _{CC} = 3 V, 2.3 V	V _I = 0 V, I _O = 30 mA			1	Ω	
			V _I = 1.7, I _O = −15 mA			1		

(1) V_{IN} and I_{IN} refer to control inputs. V_I , V_O , I_I , and I_O refer to data pins.

(2) All typical values are at $V_{CC} = 3.3\text{ V}$ (unless otherwise noted), $T_A = 25^\circ\text{C}$.

(3) For I/O ports, the parameter I_{OZ} includes the input leakage current.

(4) This is the increase in supply current for each input that is at the specified TTL voltage level, rather than V_{CC} or GND.

(5) Measured by the voltage drop between the A and B terminals at the indicated current through the switch. ON-state resistance is determined by the lower of the voltages of the two (A or B) terminals.

6.6 Dynamic Electrical Characteristics: $V_{CC} = 3.3\text{ V}$

over operating range, $T_A = -40^\circ\text{C to } 125^\circ\text{C}$, $V_{CC} = 3.3\text{ V} \pm 10\%$, GND = 0 V

PARAMETER	TEST CONDITIONS	TYP	UNIT
X_{TALK}	Crosstalk $R_L = 50\text{ }\Omega, f = 250\text{ MHz}$	-40	dB
O_{IRR}	OFF isolation $R_L = 50\text{ }\Omega, f = 250\text{ MHz}$	-41	dB
BW	Bandwidth (-3 dB) $R_L = 50\text{ }\Omega$	0.9	GHz

TS3USB221A-Q1

SCDS300D – JULY 2010 – REVISED AUGUST 2016

www.ti.com
6.7 Dynamic Electrical Characteristics: $V_{CC} = 2.5\text{ V}$

over operating range, $T_A = -40^\circ\text{C}$ to 125°C , $V_{CC} = 2.5\text{ V} \pm 10\%$, $GND = 0\text{ V}$

PARAMETER		TEST CONDITIONS	TYP	UNIT
X_{TALK}	Crosstalk	$R_L = 50$, $f = 250\text{ MHz}$	–39	dB
O_{IRR}	OFF isolation	$R_L = 50$, $f = 250\text{ MHz}$	–40	dB
BW	Bandwidth (3 dB)	$R_L = 50$	0.9	GHz

6.8 Switching Characteristics: $V_{CC} = 3.3\text{ V}$

over operating range, $T_A = -40^\circ\text{C}$ to 125°C , $V_{CC} = 3.3\text{ V} \pm 10\%$, $GND = 0\text{ V}$

PARAMETER		MIN	TYP ⁽¹⁾	MAX	UNIT
t_{pd}	Propagation delay ^{(2) (3)}		0.25		ns
t_{ON}	Line enable time	S to D, nD		30	ns
		$\overline{OE}$ to D, nD		17	
t_{OFF}	Line disable time	S to D, nD		12	ns
		$\overline{OE}$ to D, nD		10	
$t_{SK(O)}$	Output skew between center port to any other port ⁽²⁾		0.1	0.2	ns
$t_{SK(P)}$	Skew between opposite transitions of the same output ($t_{PHL} - t_{PLH}$) ⁽²⁾		0.1	0.2	ns

- (1) For Max or Min conditions, use the appropriate value specified under [Dynamic Electrical Characteristics: \$V_{CC} = 3.3\text{ V}\$](#) for the applicable device type.
- (2) Specified by design
- (3) The bus switch contributes no propagational delay other than the RC delay of the on resistance of the switch and the load capacitance. The time constant for the switch alone is of the order of 0.25 ns for 10-pF load. Since this time constant is much smaller than the rise and fall times of typical driving signals, it adds very little propagational delay to the system. Propagational delay of the bus switch, when used in a system, is determined by the driving circuit on the driving side of the switch and its interactions with the load on the driven side.

6.9 Switching Characteristics: $V_{CC} = 2.5\text{ V}$

over operating range, $T_A = -40^\circ\text{C}$ to 125°C , $V_{CC} = 2.5\text{ V} \pm 10\%$, $GND = 0\text{ V}$

PARAMETER		MIN	TYP ⁽¹⁾	MAX	UNIT
t_{pd}	Propagation delay ^{(2) (3)}		0.25		ns
t_{ON}	Line enable time	S to D, nD		50	ns
		$\overline{OE}$ to D, nD		32	
t_{OFF}	Line disable time	S to D, nD		23	ns
		$\overline{OE}$ to D, nD		12	
$t_{SK(O)}$	Output skew between center port to any other port ⁽²⁾		0.1	0.2	ns
$t_{SK(P)}$	Skew between opposite transitions of the same output ($t_{PHL} - t_{PLH}$) ⁽²⁾		0.1	0.2	ns

- (1) For Max or Min conditions, use the appropriate value specified under [Dynamic Electrical Characteristics: \$V_{CC} = 2.5\text{ V}\$](#) for the applicable device type.
- (2) Specified by design
- (3) The bus switch contributes no propagational delay other than the RC delay of the on resistance of the switch and the load capacitance. The time constant for the switch alone is of the order of 0.25 ns for 10-pF load. Since this time constant is much smaller than the rise/fall times of typical driving signals, it adds very little propagational delay to the system. Propagational delay of the bus switch, when used in a system, is determined by the driving circuit on the driving side of the switch and its interactions with the load on the driven side.

8 Detailed Description

8.1 Overview

The TS3USB221A-Q1 device is a 2-channel SPDT switch specially designed for the switching of high-speed USB 2.0 signals in automotive applications, such as USB hubs. The wide bandwidth (900 MHz) of this switch allows signals to pass with minimum edge and phase distortion. The device multiplexes differential outputs from a USB host device to one of two corresponding outputs. The switch is bidirectional and offers little or no attenuation of the high-speed signals at the outputs. The device also has a low power mode that will reduce the power consumption to 1 μ A for portable applications with a battery or limited power budget.

The device is designed for low bit-to-bit skew and high channel-to-channel noise isolation, and is compatible with various standards, such as high-speed USB 2.0 (480 Mbps).

The TS3USB221A-Q1 device integrates ESD protection cells on all pins, is available in a tiny UQFN package (2 mm $\times$ 1.5 mm) and is characterized over the free air temperature range from -40°C to 125°C .

Figure 16. Simplified Schematic of Each FET Switch (SW)

8.3 Feature Description

8.3.1 Low Power Mode

The TS3USB221A-Q1 has a low power mode that reduces the power consumption to 1 μ A while the devices is not in use. To put the device in low power mode and disable the switch, the bus-switch enable pin $\overline{\text{OE}}$ must be supplied with a logic High signal.

8.4 Device Functional Modes

[Table 1](#) lists the functions of this device.

Table 1. Truth Table

S	$\overline{OE}$	FUNCTION
X	H	Disconnect
L	L	D = 1D
H	L	D = 2D

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

There are many USB applications in which the USB hubs or controllers have a limited number of USB I/Os. The TS3USB221A-Q1 solution can effectively expand the limited USB I/Os by switching between multiple USB buses to interface them to a single USB hub or controller.

9.2 Typical Application

Copyright © 2016, Texas Instruments Incorporated

Figure 17. Application Schematic

9.2.1 Design Requirements

Design requirements of the USB 1.0, 1.1, and 2.0 standards should be followed.

TI recommends pulling the digital control pins S and $\overline{OE}$ up to V_{CC} or down to GND to avoid undesired switch positions that could result from the floating pin.

9.2.2 Detailed Design Procedure

The TS3USB221A-Q1 can be properly operated without any external components. However, TI recommends connecting unused pins to ground through a 50-Ω resistor to prevent signal reflections back into the device.

Typical Application (continued)

9.2.3 Application Curves

Figure 18. Eye Pattern: 480-Mbps USB Signal With No Switch (Through Path)

Figure 19. Eye Pattern: 480-Mbps USB Signal With Switch NC Path

Figure 20. Eye Pattern: 480-Mbps USB Signal With Switch NO Path

10 Power Supply Recommendations

Power to the device is supplied through the VCC pin and should follow the USB 1.0, 1.1, and 2.0 standards. TI recommends placing a bypass capacitor as close to the supply pin VCC to help smooth out lower frequency noise to provide better load regulation across the frequency spectrum.

11 Layout

11.1 Layout Guidelines

Place supply bypass capacitors as close to VCC pin as possible, and avoid placing the bypass capacitors near the D+/D- traces.

The high speed D+/D- traces should always be matched lengths and must be no more than 4 inches; otherwise, the eye diagram performance may be degraded. A high-speed USB connection is made through a shielded, twisted pair cable with a differential characteristic impedance. In layout, the impedance of D+ and D- traces should match the cable characteristic differential impedance for optimal performance.

Route the high-speed USB signals using a minimum of vias and corners which will reduce signal reflections and impedance changes. When a via must be used, increase the clearance size around it to minimize its capacitance. Each via introduces discontinuities in the signal's transmission line and increases the chance of picking up interference from the other layers of the board. Be careful when designing test points on twisted pair lines; through-hole pins are not recommended.

When it becomes necessary to turn 90°, use two 45° turns or an arc instead of making a single 90° turn. This reduces reflections on the signal traces by minimizing impedance discontinuities.

Do not route USB traces under or near crystals, oscillators, clock signal generators, switching regulators, mounting holes, magnetic devices or IC's that use or duplicate clock signals.

Avoid stubs on the high-speed USB signals because they cause signal reflections. If a stub is unavoidable, then the stub should be less than 200 mm.

Route all high-speed USB signal traces over continuous planes (VCC or GND), with no interruptions.

Avoid crossing over anti-etch, commonly found with plane splits.

Due to high frequencies associated with the USB, TI recommends a printed-circuit board with at least four layers; two signal layers separated by a ground and power layer as shown in [Figure 21](#).

Figure 21. Four-Layer Board Stack-Up

The majority of signal traces should run on a single layer, preferably Signal 1. Immediately next to this layer should be the GND plane, which is solid with no cuts. Avoid running signal traces across a split in the ground or power plane. When running across split planes is unavoidable, sufficient decoupling must be used. Minimizing the number of signal vias reduces EMI by reducing inductance at high frequencies.

E2E is a trademark of Texas Instruments.
All other trademarks are the property of their respective owners.

12.4 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

12.5 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TS3USB221AQRSERQ1	ACTIVE	UQFN	RSE	10	3000	Green (RoHS & no Sb/Br)	CU NIPDAUAG	Level-3-260C-168 HR	-40 to 125	OFW	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PLASTIC QUAD FLATPACK NO-LEAD

4207268-3/D 01/11

- NOTES: A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
B. This drawing is subject to change without notice.
C. QFN (Quad Flatpack No-Lead) package configuration.
D. This package complies to JEDEC MO-288 variation UEFD.

RSE (R-PUQFN-N10)

PLASTIC QUAD FLATPACK NO-LEAD

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.
 - E. Maximum stencil thickness 0,127 mm (5 mils). All linear dimensions are in millimeters.
 - F. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
 - G. Side aperture dimensions over-print land for acceptable area ratio > 0.66. Customer may reduce side aperture dimensions if stencil manufacturing process allows for sufficient release at smaller opening.

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, or other requirements. These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to TI's Terms of Sale (www.ti.com/legal/termsofsale.html) or other applicable terms available either on ti.com or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.
